

Short Quiz 10**Score distribution**

42 submitted — mean 3.6, median 4.0, range 1–5 (out of 5)

Marks on this session use partial credit, so scores can be fractional — bars group scores into whole-mark bands: the bar labeled "8" covers every score from 8 up to, but not including, 9.

Per-question breakdown

Question	% Correct	Mean Credit	Correct	Option breakdown
Q1. What does OS do when a process blocks for a resource (e.g., I/O)?	90% (38/42)	0.90	B	A: 0 — Keeps it running to save time B ✓: 38 — Moves it from running to waiting queue C: 0 — Terminates the process D: 4 — Ignores it until timer interrupt
Q2. Which of these scheduling policy prevent convoy effect?	69% (29/42)	0.69	C	A: 1 — First come first serve B: 12 — Shortest job first C ✓: 30 — Round robin
Q3. Which of these scheduling policy MUST be aware of process execution time?	69% (29/42)	0.69	B	A: 3 — First come first serve B ✓: 29 — Shortest job first C: 5 — Round robin D: 5 — Completely fair scheduler
Q4. Which of these scheduling optimizes average WAITING time?	45% (19/42)	0.45	D	A: 2 — First come first serve B: 13 — Shortest job first C: 9 — Shortest time to completion first D ✓: 20 — Round robin
Q5. Which of these scheduling optimizes average COMPLETION time?	83% (35/42)	0.83	C	A: 4 — First come first serve B: 3 — Round robin C ✓: 35 — Shortest time to completion first
